

Employee Communication: Gender Pay Gap Reporting – 2020 Report

We are an employer required by law to carry out Gender Pay Reporting under the Equality Act 2010 (Gender Pay Gap Information) Regulations 2017.

The process involves carrying out six calculations that show the difference between the average earnings of men and women in our organisation; it does not involve publishing individual employees data. We are required to publish the results on our own website and a government website. The results published are as at December 2019.

We use these results to assess:

- the levels of gender equality in our workplace
- the balance of male and female employees at different levels
- how effectively talent is being maximised and rewarded

Gender Pay Reporting requires our organisation to make calculations based on employee gender. We establish this by using our existing HR and payroll records. All employees can confirm and update their records if they choose to by contacting Amanda Sadler, Human Resources Director.

The challenge in any organisation is to eliminate any gender pay gap, where a gap is identified. If it is necessary to tackle our gender pay gap, further details will become available by speaking to the Human Resources Team.

The engineering industry continues to be perceived as a predominately male dominated sector. Therefore, by default, few women have a tendency to select this as a career choice compared to men. As an industry, not only are companies proactively encouraging females to choose this as a viable career option but the education system through the STEM initiative is encouraging students to specialise in related subjects i.e. science, technology, engineering and mathematics.

In May 2019, Optimum recruited a female Engineer and also promoted three females from administrative roles into Managerial positions. These are all active steps to close the gender pay gap within the business.

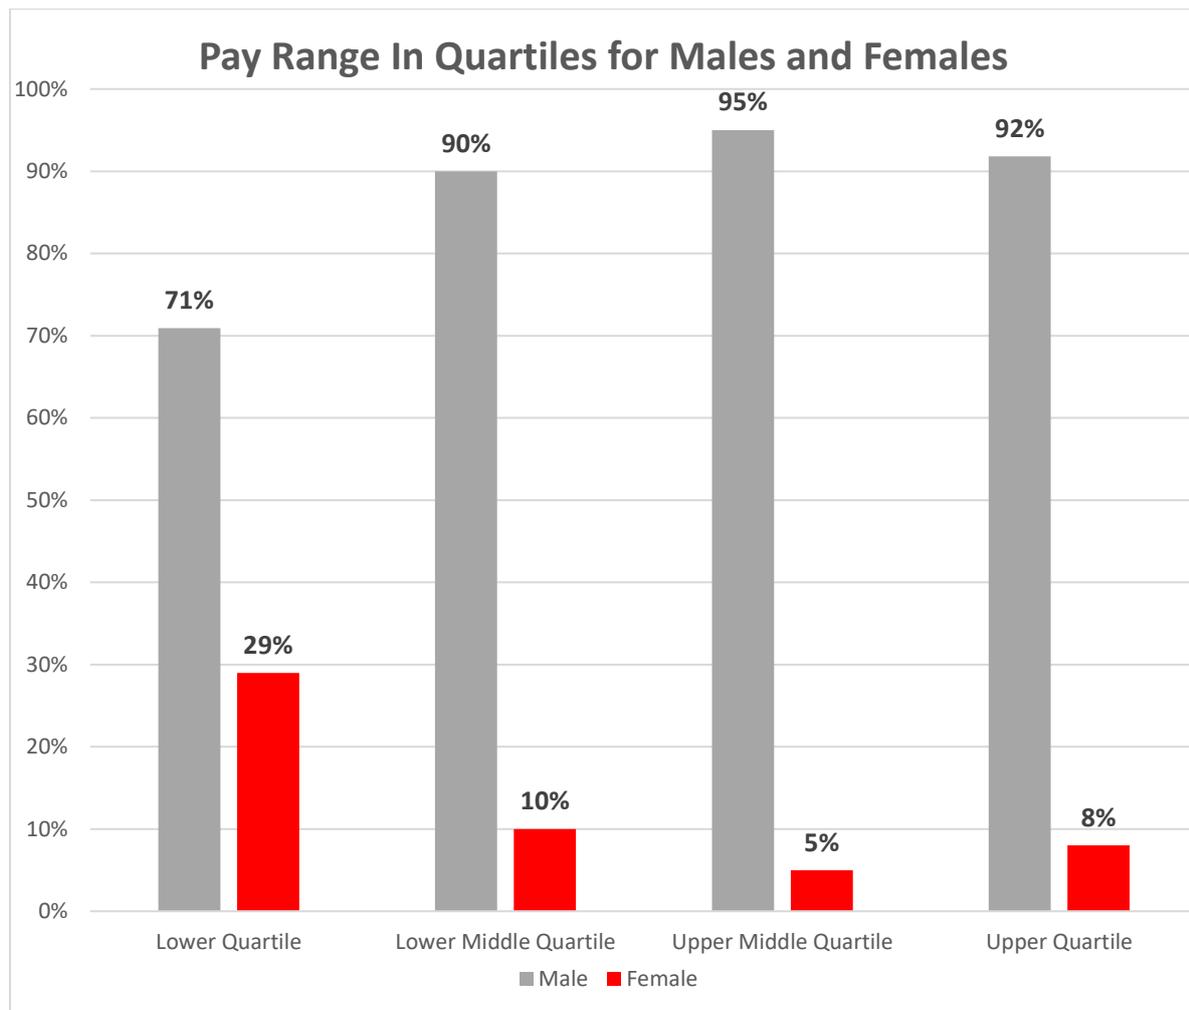

The gender pay gap data published this year consist of statistics for 381 men and 59 women. The majority of women within our company are based in administrative positions. Therefore, by default, this indicates an average annual salary for men at £42,784 and women at £35,013. This in an increase for both genders from the last two years.

Pay and Bonus Gap – The difference between men and women

	Mean	Median
Hourly fixed pay	16%	17%
Bonus paid	0%	0%

Bonus payments were not made in 2019. Therefore, the proportion of colleagues awarded a bonus for 2019 were 0% for both males and females. Hence, there has been no data published in this year's annual report.

Pay Quartiles – The difference between men and women

It is nationally recognised that there is a severe skills shortage of national building maintenance services incorporating mechanical, electrical, building and specialist fabric and public health maintenance services within the UK. Consequently our salaries reflect a fiercely competitive rate for experience and expertise. For several years Optimum has continued to offer an Apprentice programme to encourage growth and succession planning within the industry. We are especially keen to encourage women apprentices and clearly state on our website that we would be delighted to arrange work experience to give an insight into what an engineering apprenticeship involves.

Optimum is proud to have high levels of staff retention that we believe is a direct reflection of the way we value our employees as individuals, listen to them carefully and train them well. We are a fast growing company where skills, knowledge and commitment are recognised and rewarded.

You can learn more about Gender Pay Reporting by visiting www.acas.org.uk/genderpay or by contacting Amanda Sadler, Human Resources Director.

I confirm the data reported is accurate as at the date of publication.

Stewart Collier
